

Product Manufacturing Considerations

Normal Product Manufacturing: The Revenue from Sale Covers the Cost of Manufacture, Resulting in Profit.

Quality Hold Situation: The Product Can be Destroyed Resulting in Additional Product Replacement Non-tangibles

The Accu-ray Advantage

Recover the Product and Maintain Profit: The Cost to Recover is Less Than the Profit, Maintaining Slightly Smaller Profit

Recover the Product and Minimize Loss: The Cost to Recover is More Than the Profit Resulting in a Loss, BUT not as much as Destroying the Product.

Break-even (But Without Product Replacement Non-tangibles)

Break-even Occurs When the Cost to Recover is Equal to the Revenue from Sale. At This Point the Loss of Paying for Recovery and Selling the Product is the same as when you DESTROY the Product.
